

HUYNH LAM

Software Development Engineer in Test (SDET)

San Diego, CA | 858-598-7731 | huynhlam56@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

TECHNICAL SKILLS

Languages & Testing: JavaScript, Python, SQL, Playwright, Page Object Model (POM), AI-Assisted Test Automation, RESTful APIs, Test Case & Test Plan Design, Defect Tracking & Reporting

Web & Data: React.js, Redux.js, Express, Flask, HTML, CSS, Component-Based Architecture, State Management, ORM, MySQL, PostgreSQL

Process & Tools: Agile QA Methodology, User Story-Based Test Design, CI/CD Pipelines, Git

WORK EXPERIENCE

Quality Assurance Engineer II (SDET)

Jul 2024 - Sep 2026

QA Wolf — Automated End-to-End Testing as a Service — Remote

- Engineered Playwright E2E test suites (150–1,400 tests) using the Page Object Model for enterprise SaaS clients
- Tripled test authoring speed with AI agents (10 tests/day vs. ~15/week manually), maintaining coverage quality through peer review across 5 owned enterprise accounts, including a 1,400-test flagship client
- Took ownership of coverage planning by proactively scoping customer applications and authoring full test plans upfront, cutting client workload and accelerating onboarding
- Built test plans and cases from user stories within Agile sprints, surfacing defects early to keep releases on schedule
- Fixed root-cause flakiness (timezone-parsing bugs, retry-logic violations) across 20 concurrent client suites (200+ tests) in daily 3-hour shifts, keeping CI/CD pipelines unblocked
- Enforced automation code quality by reviewing and merging peer pull requests, preventing flaky or inconsistent logic from entering the shared framework relied on by 20 client accounts
- Stepped into team-lead responsibilities during absences and served as primary customer contact, translating stakeholder bug reports into engineering tasks to keep releases and client relationships on track

Medical Assistant

Apr 2021 - Jun 2024

San Diego Family Care — San Diego, CA

- Followed detailed clinical protocols and procedures with strict accuracy, applying the same quality-first, zero-error mindset now used to execute test cases against defined test plans
- Conducted structured patient interviews to gather and document detailed information, building the stakeholder communication and requirements-gathering skills used to translate user stories into test coverage
- Adapted quickly to Electronic Medical Records (EMR) systems and new clinical technologies, reflecting the same fast ramp-up applied to learning new QA tools, frameworks, and client codebases

PROJECTS

Rewear — Full-Stack SDET Portfolio Project

Next.js · TypeScript · Playwright · PostgreSQL — [GitHub](#)

- Built a full-stack test-orchestration dashboard (Next.js, TypeScript, PostgreSQL/Prisma) that discovers registered Playwright tests via the CLI, triggers on-demand runs, and persists results for historical reporting
- Authored a Playwright E2E suite covering critical user flows and deliberate edge cases, including 404s, unauthenticated access, and empty states
- Designed a testability-first architecture with a shared service layer consumed by both server-rendered UI and a versioned REST API (/api/v1), enabling parallel E2E and API-level test strategies

Petsy — Full-Stack E-Commerce Marketplace

React · Redux · Flask · PostgreSQL — [GitHub](#)

- Collaborated with a team of four to build Petsy, an Etsy-style marketplace web app for pet products, using agile development practices and Git/GitHub for version control and peer code review
- Implemented user authentication and authorization mechanisms to protect user data privacy and integrity

EDUCATION

App Academy

2023

Full Stack Software Engineering Certificate

San Diego State University

2020

B.S., Cellular and Molecular Biology
